

IMPLANTS, VENEERS, BRIDGES? IT'S MY TEETH, NOT MY HOUSE!

Our aim is to inform you, not to confuse you.

A veneer is a thin shell made out of porcelain. They are custom made and cemented to the front of the tooth. A veneer can be used to treat dental conditions such as a slightly crooked tooth, discoloured teeth, chipped teeth or they can be used to cover spaces in between teeth.

A veneer is made by a dental laboratory.

A dental implant is a metal device designed to replace missing teeth. The device is usually made out of titanium and is surgically placed into the jawbone where the tooth is missing. An implant is permanent. A dental implant is designed to act as the tooth root and can anchor an artificial tooth or teeth such as a crown, bridge or denture.

Which procedures are best for you? That's a decision we make together and we make sure it's the right one.

The truth, no tooth fairy stories.
